

MASSEY HARRIS TRACTOR

- YEAR: 1936
- MODEL: 25 -40 Steel Wheel
- COUNTRY: Canada
- ENGINE: 25HP – 4 Cylinder International Kero engine
- ITEM NUMBER: 187
- DONATED BY: Mr Vern Shields

THE MODEL 25 In 1931, the Wallis 20/30 was updated and given a 26/40 rating. This model became the Massey-Harris Model 25 in 1934, and at that time the old Wallis gray color was replaced by Massey-Harris' new dark-green color, with red wheels. The Model 25 was styled from 1938 to 1940, when production ended.

Massey-Harris produced its own engine for this tractor--the Model 25--a four-cylinder, valve-in-head engine with lightweight pistons and replaceable cylinder sleeves; that operated at 1,200 RPM and produced 24.92 HP at the drawbar and 44.24 HP at the belt pulley. The blocks were probably cast by the Continental Company. The engine could utilize gasoline, kerosene, or distillate. The Massey-Harris Model 25 had three forward speeds, an oil bath air cleaner, cut and hardened steel gears, roller bearings, an improved transmission, and a 540 RPM. Standard equipment included fenders, a radiator screen, rear-wheel scrapers (steel wheels), and a belt pulley. Options included rubber tires, larger tires, skid bands for the front wheels (steel wheels), a cowhide seat cover, a cushion seat with a backrest, a PTO, a swinging drawbar, a belt guide, and extension rims. The Model 25 with steel wheels sold for \$1,275; with rubber tires, the price was \$1,530. A total of 14,112 unstyled and approximately 1,000 styled Model 25 tractors were manufactured between 1933 and 1940.
